

# Introduction to the Community Earth System Model (CESM)

**THE 2023 ANNUAL CESM TUTORIAL**

*Dr. Gokhan Danabasoglu (Chief Scientist)*  
&  
*Dr. Alice DuVivier (Project Scientist)*

10 JULY 2023

# Global Earth System Models and CESM

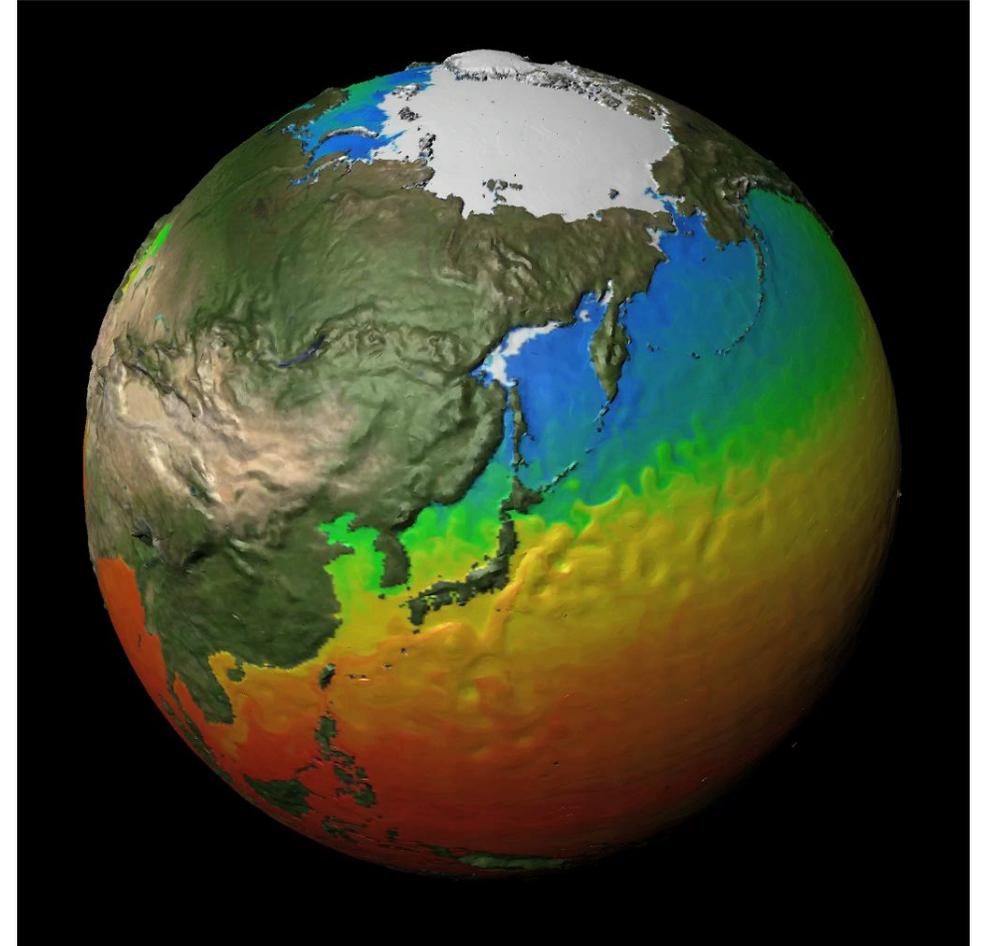

# Global Earth System Models

A virtual laboratory for experimentation ....

General purposes include:

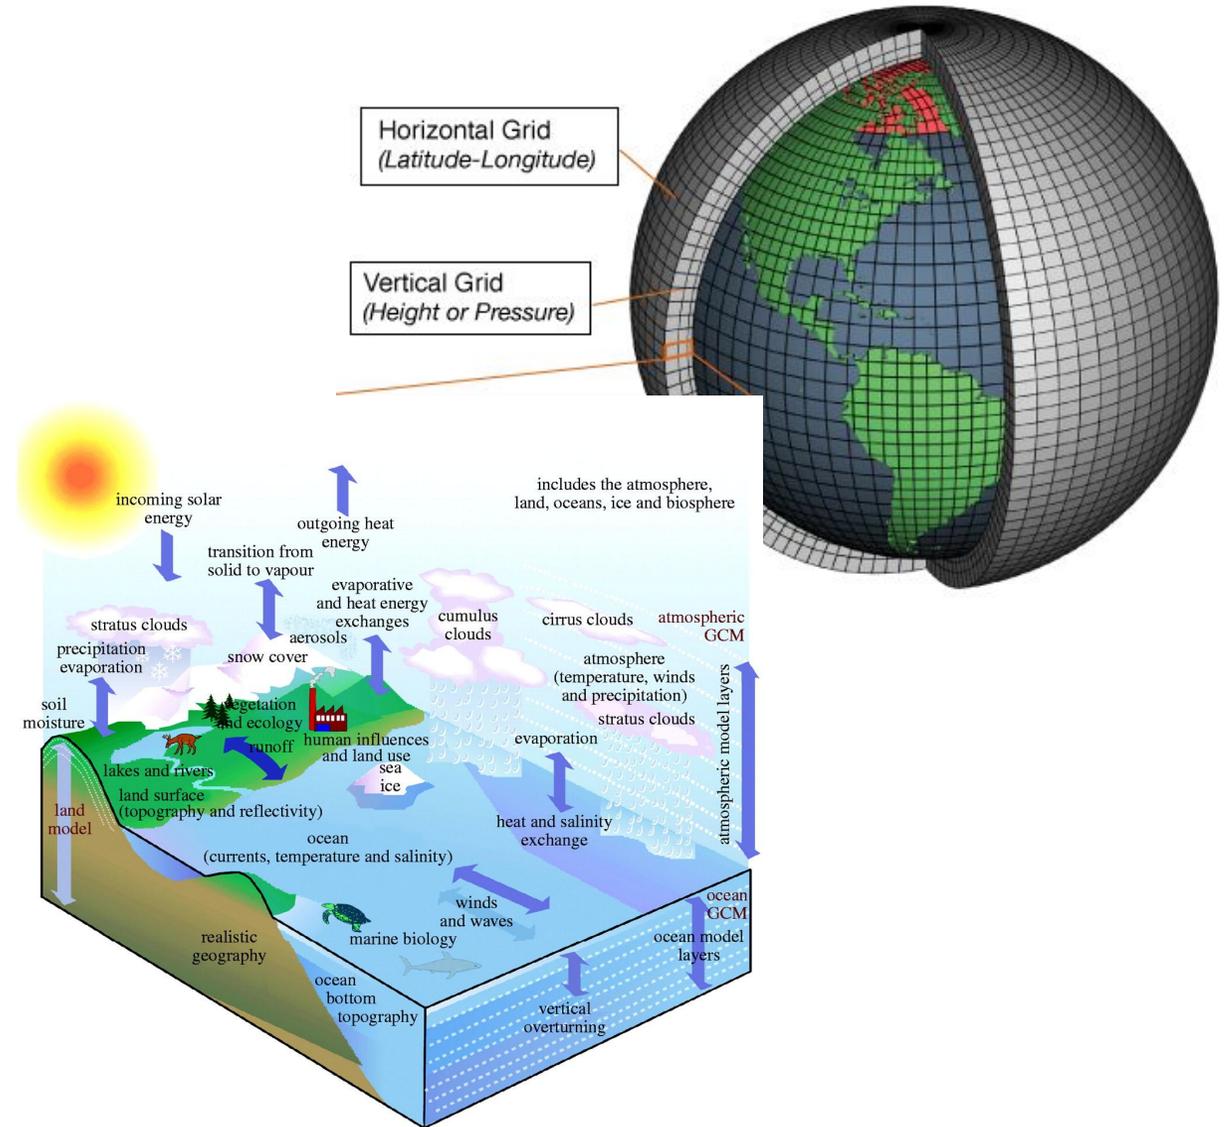

- Providing scientific and mechanistic understanding of past observed events and changes;
- Simulating recent past, present, and future (projections) climate changes and their impacts;
- Studying climate variability and making subseasonal-to-multidecadal Earth system predictions; and
- Providing actionable, societally-relevant information.

Small and Scheitlin

# Global Earth System Models

- The models use physical equations to simulate key fields and processes in the atmosphere, ocean, land, sea-ice, land-ice, ...
- Processes that remain below the grid resolution need to be parameterized.
- Build on our understanding of processes from observations and highly-detailed models (e.g., process models, large eddy simulations).

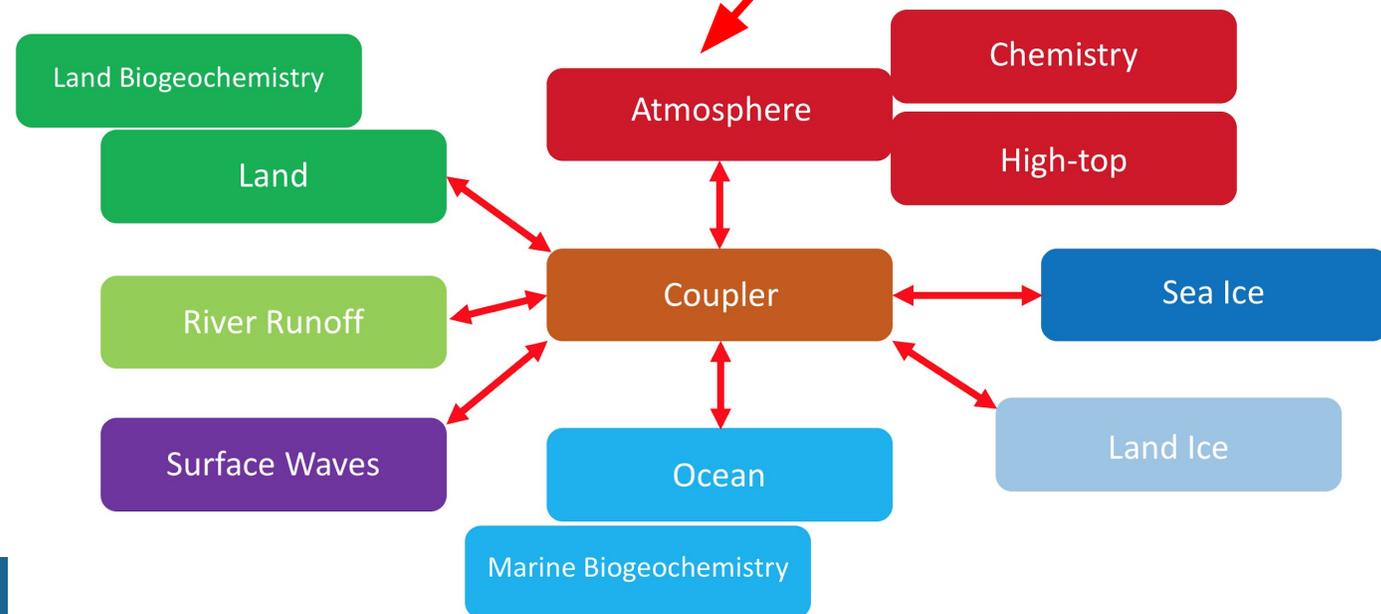

# Global Earth System Models

## Forcings:

- Greenhouse gases
- Anthropogenic aerosols
- Volcanic eruptions
- Solar variability

Community Earth System Model (CESM) is an open-source community model available via GitHub.

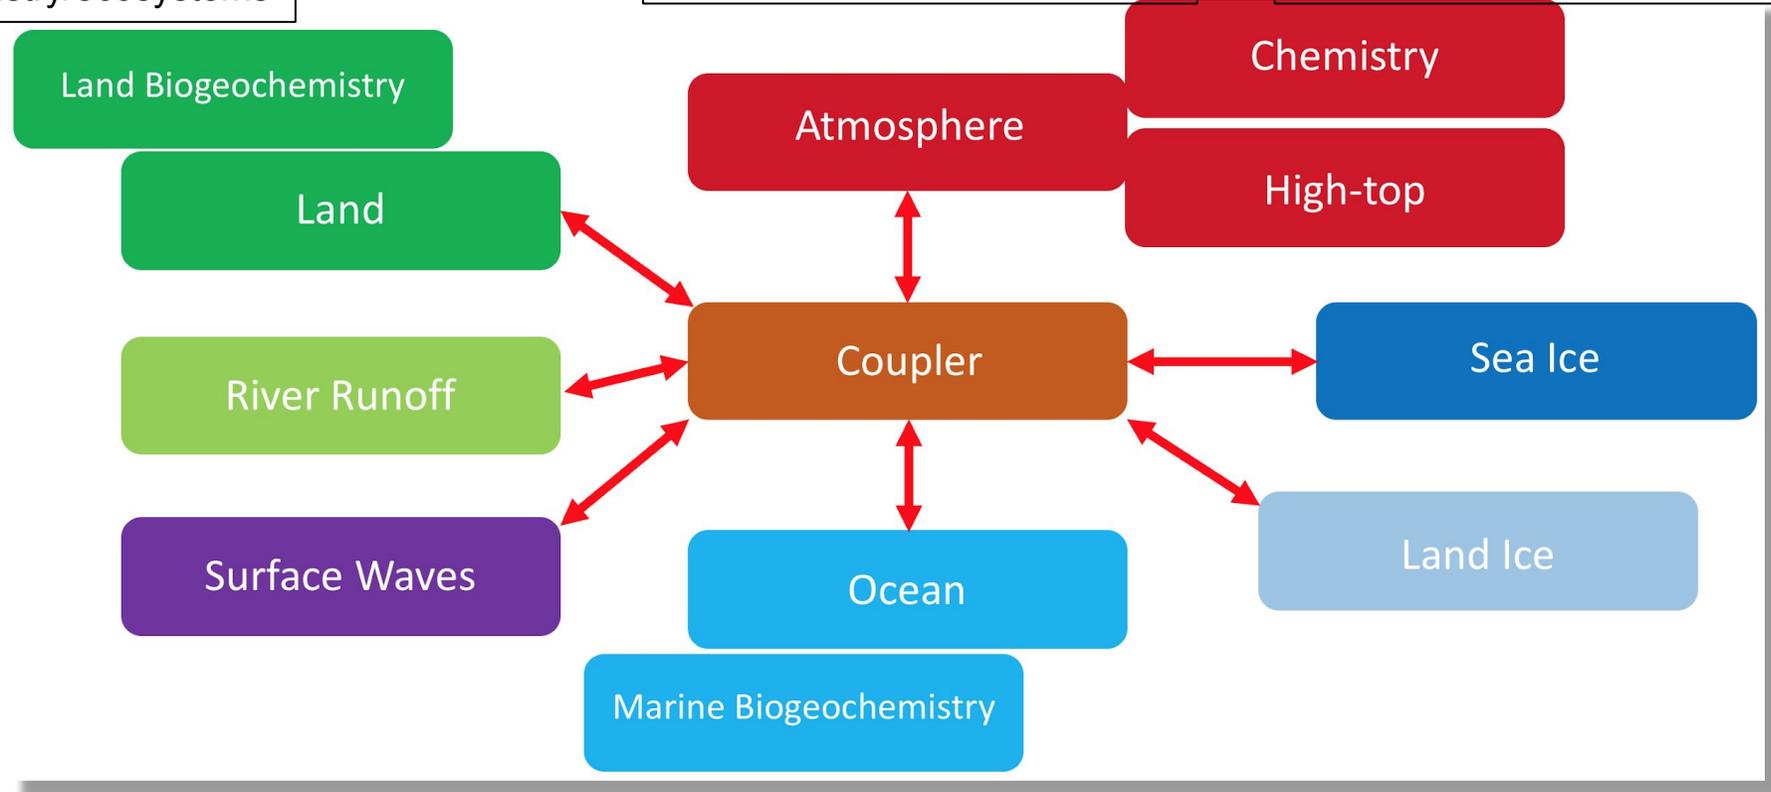

# Global Earth System Models

Tuesday Land Lectures:  
- Biogeophysics  
- Biogeochemistry/ecosystems

Monday Atmospheric Lectures:  
- Dynamics  
- Parameterizations

Wednesday Atmospheric Lectures:  
- Whole atmosphere  
- Chemistry

Wednesday  
Sea Ice  
Lecture

Friday  
Land Ice  
Lecture

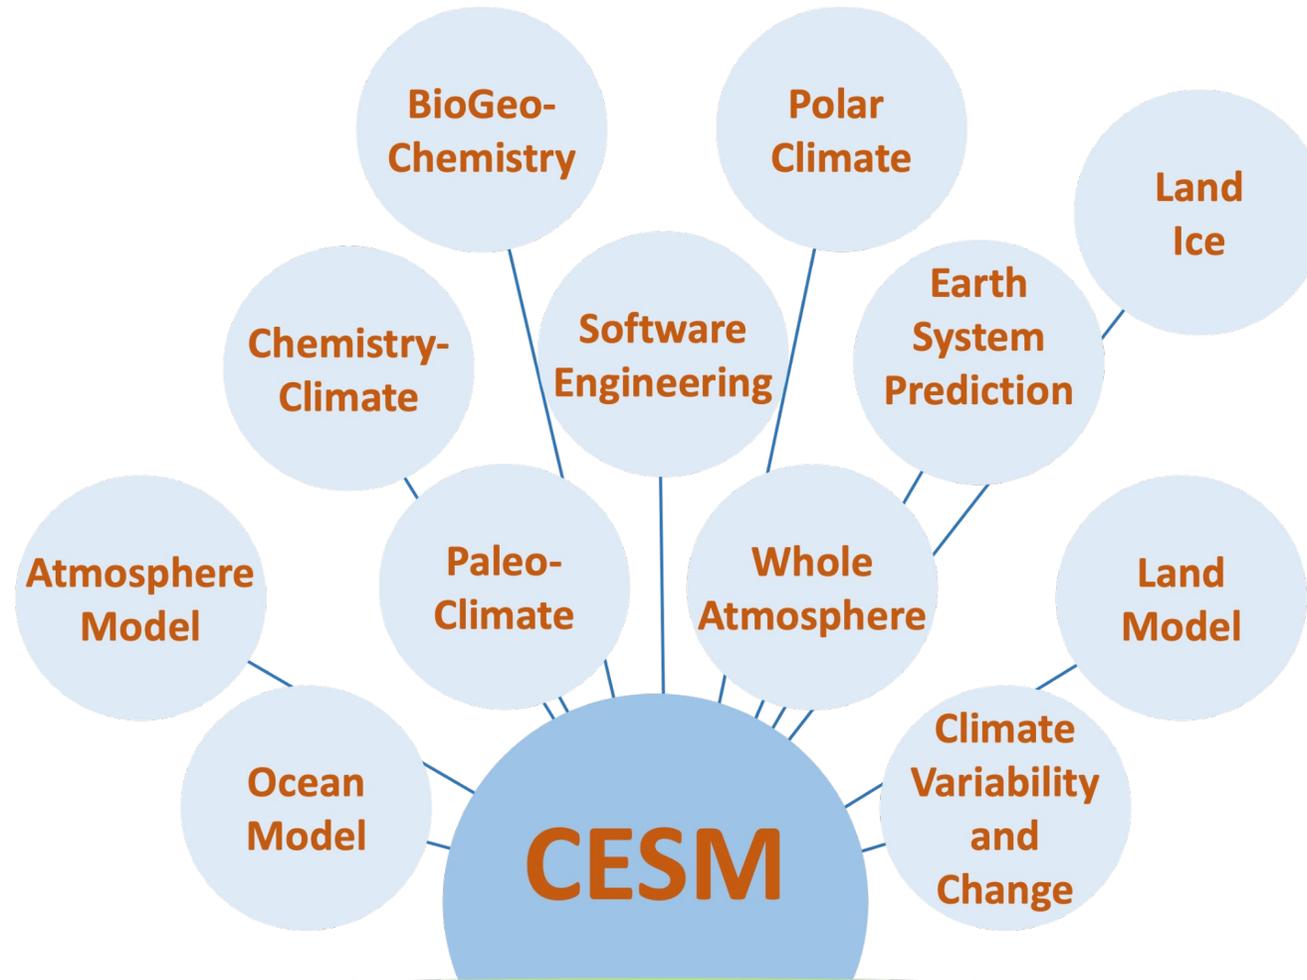

Thursday Ocean Lectures:  
- Basics/overview  
- Parameterizations

Friday Ocean Lectures:  
- Biogeochemistry

CESM Advisory Board

CESM Scientific Steering Committee

# CESM Governance

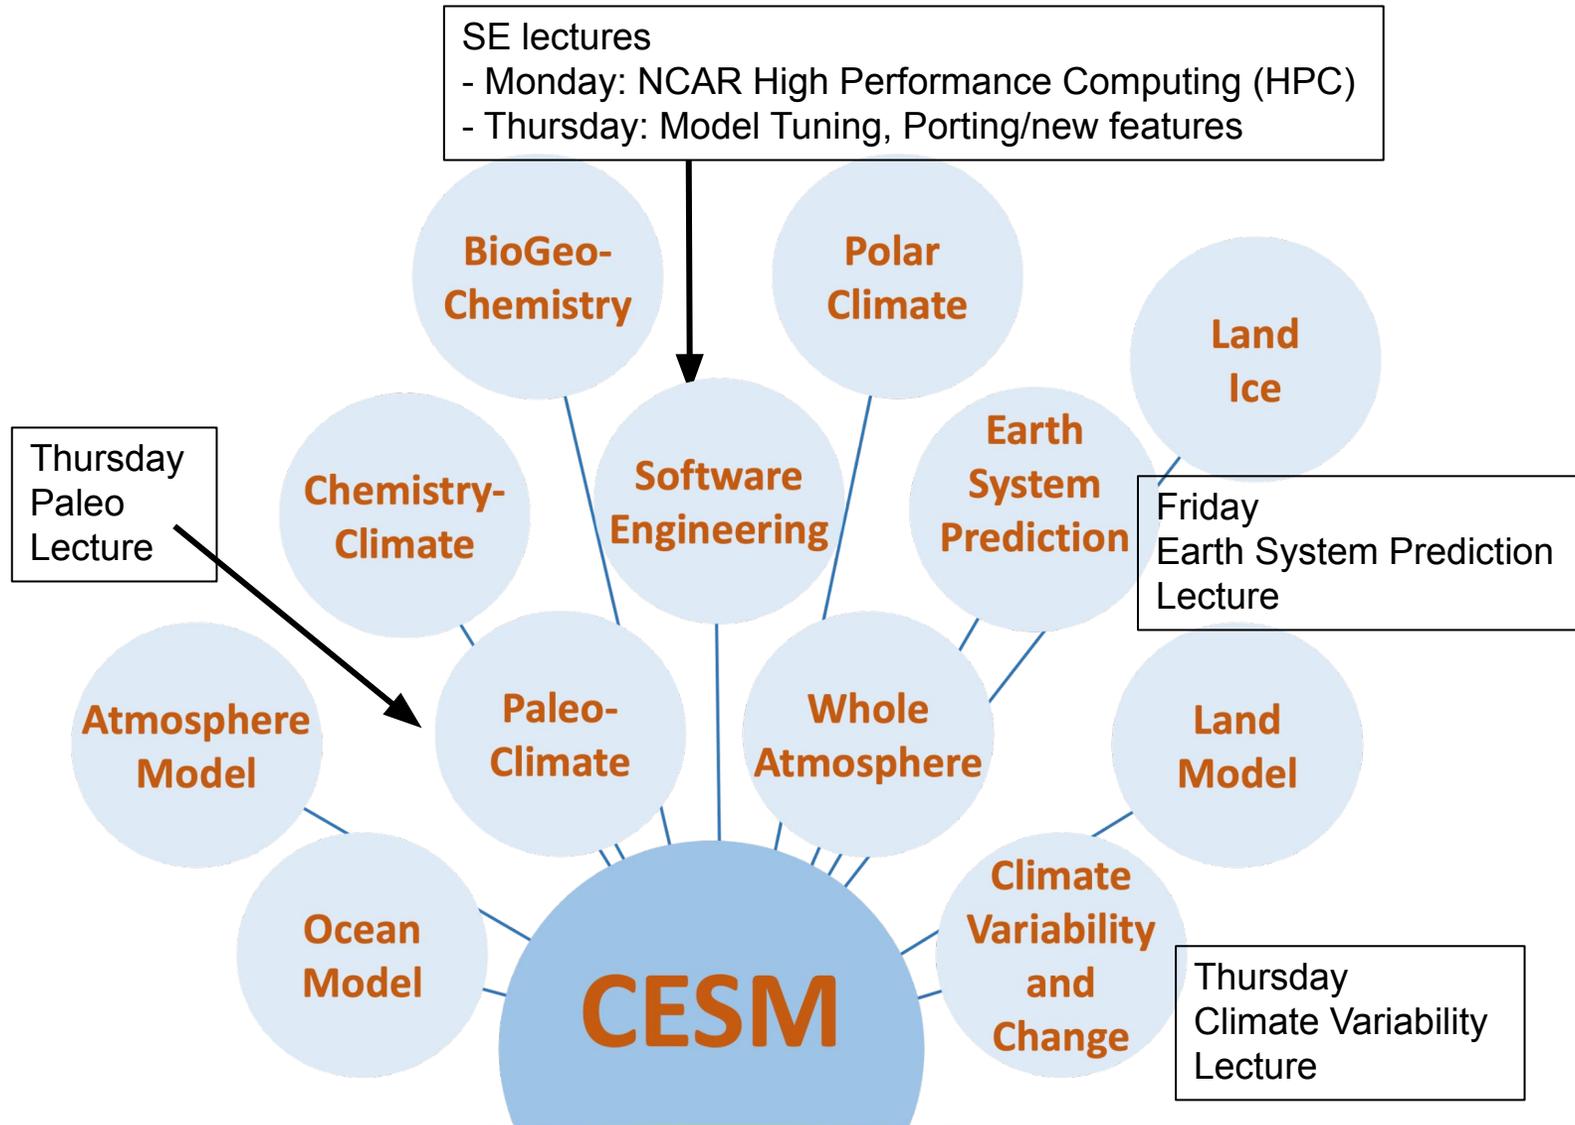

Community-  
based  
governance

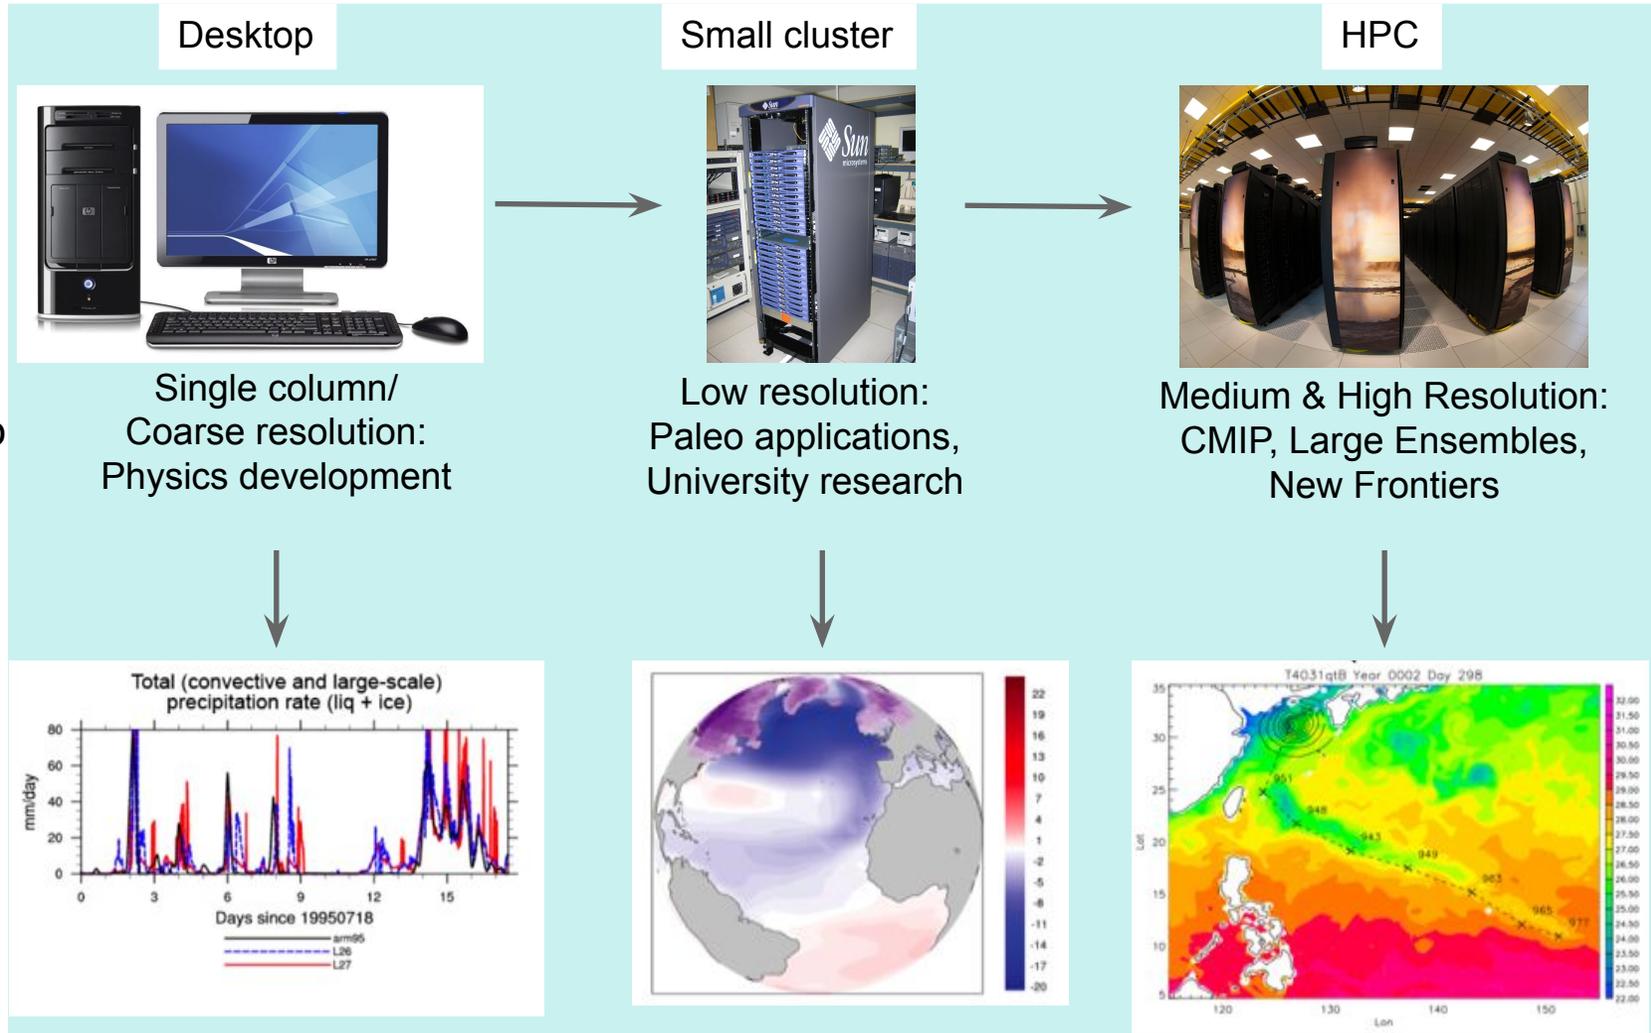

~30 years of model  
development and  
applications

<http://www.cesm.ucar.edu/management>

# CESM Working Groups

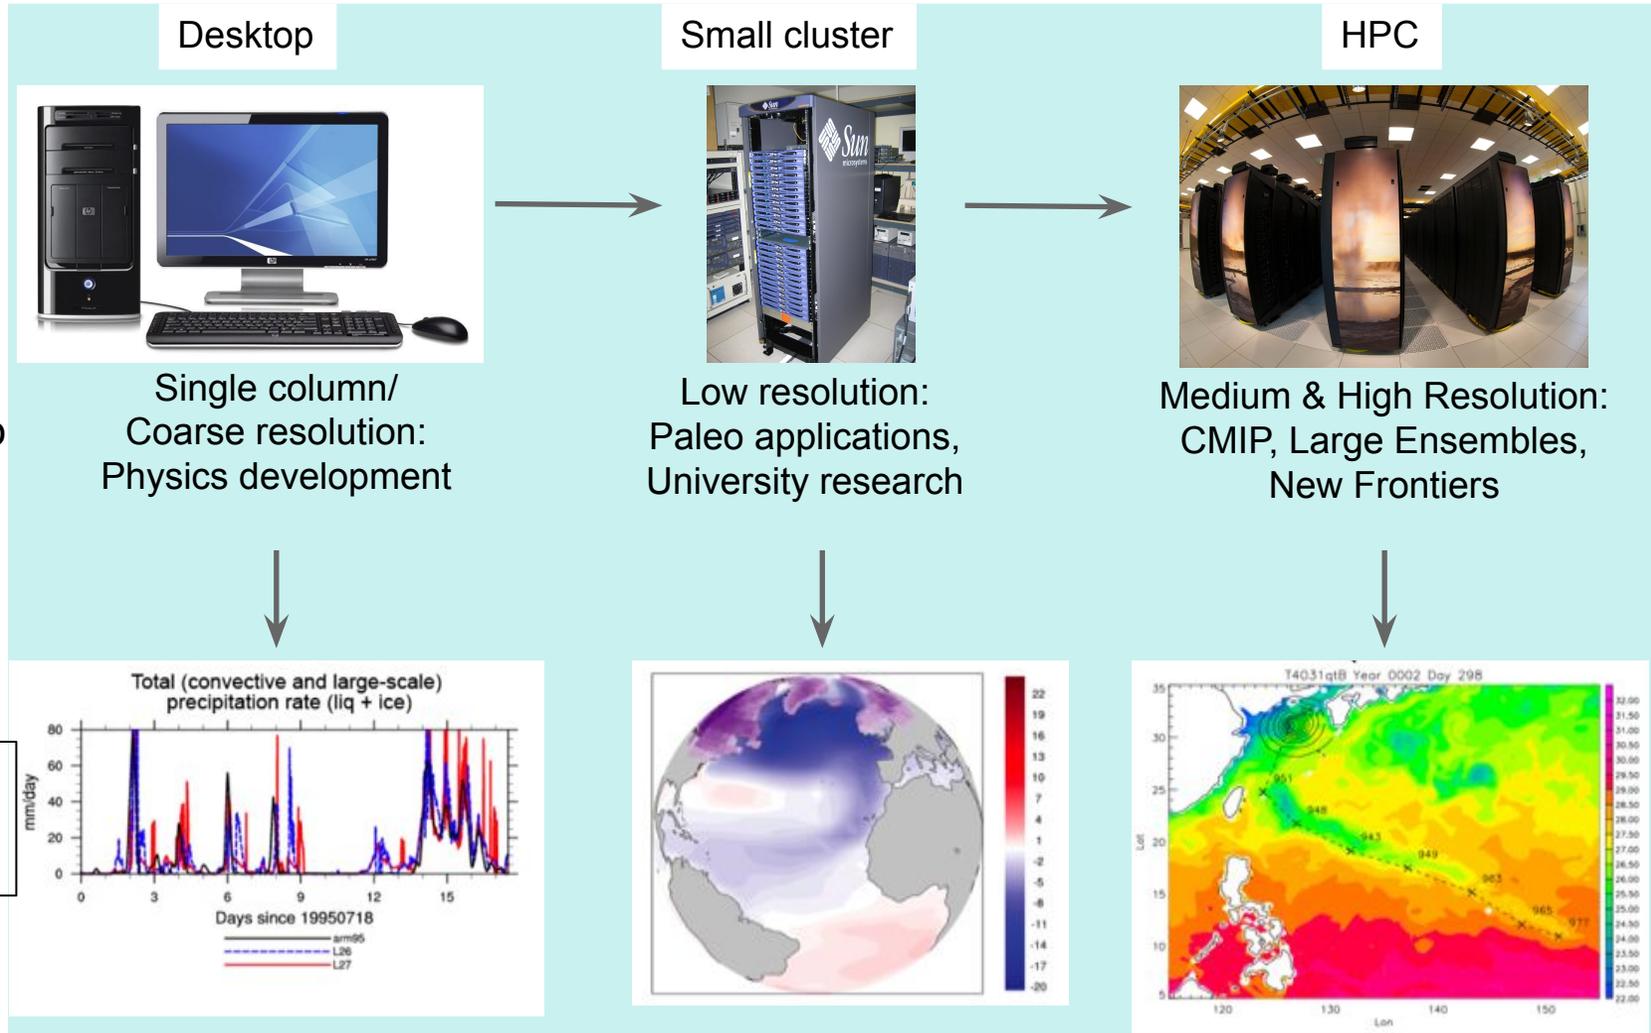

# CESM supports a range of climate science goals through a single model code base

Containerized (cloud) configurations are also available.

# CESM supports a range of climate science goals through a single model code base

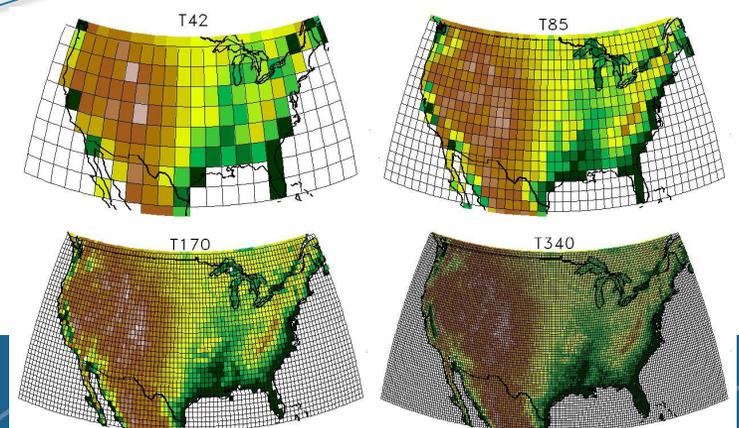

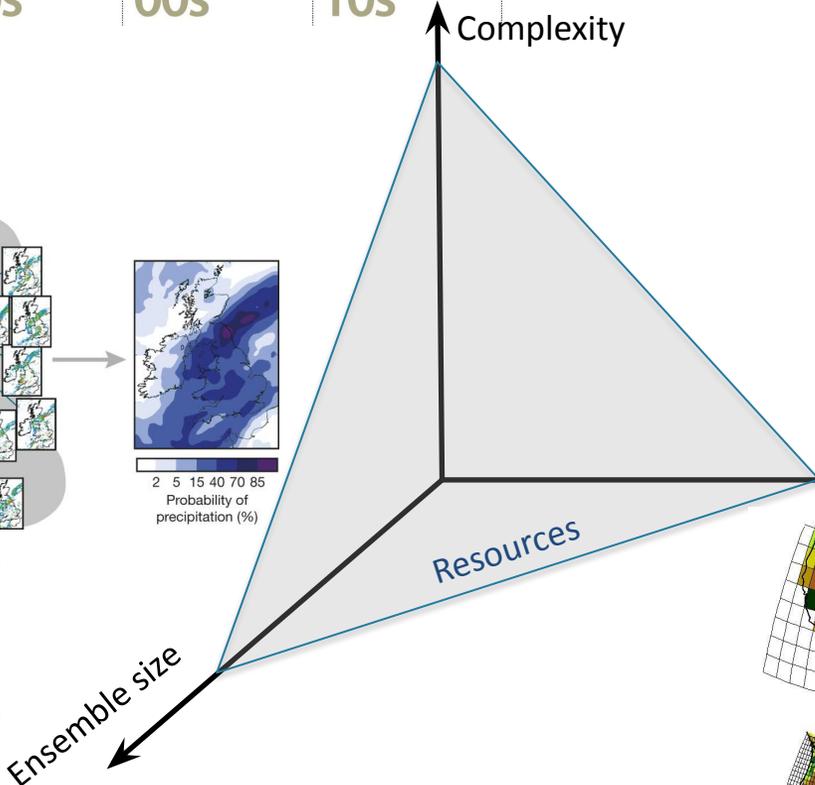

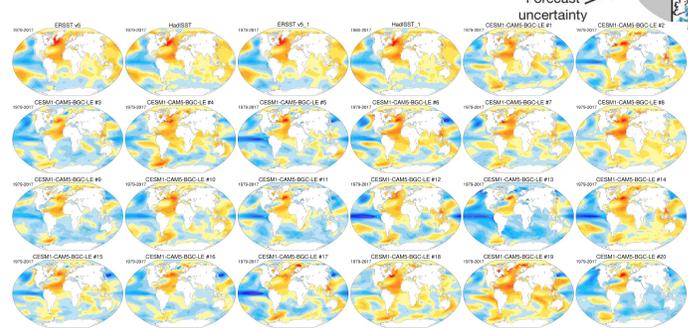

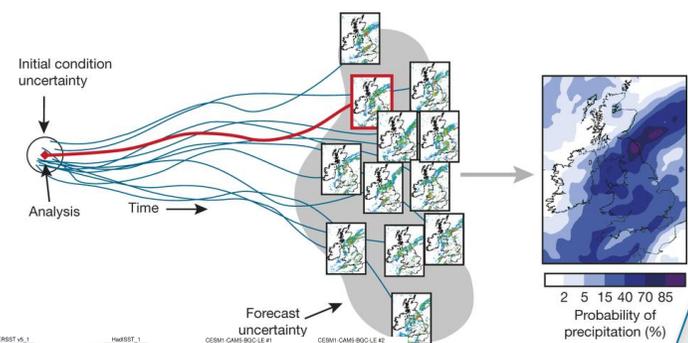

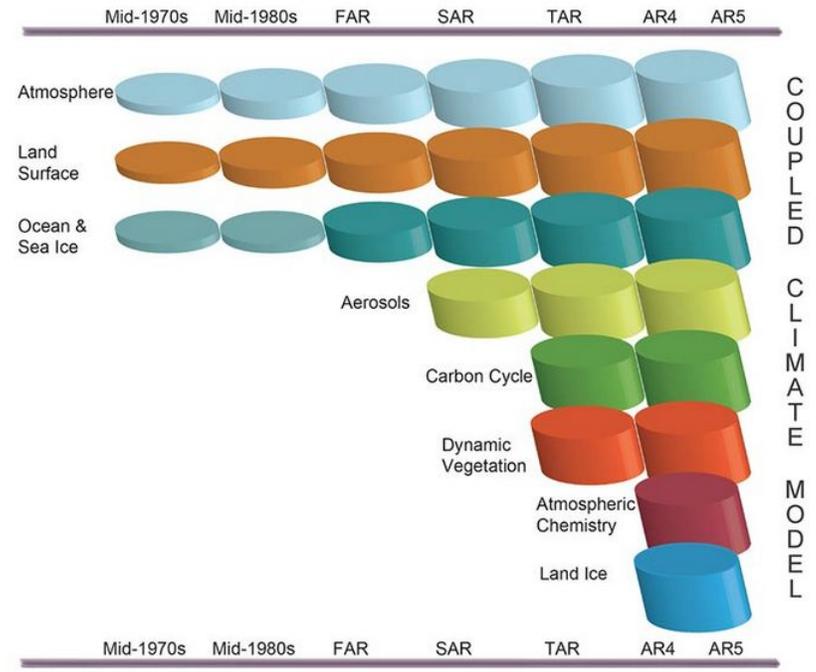

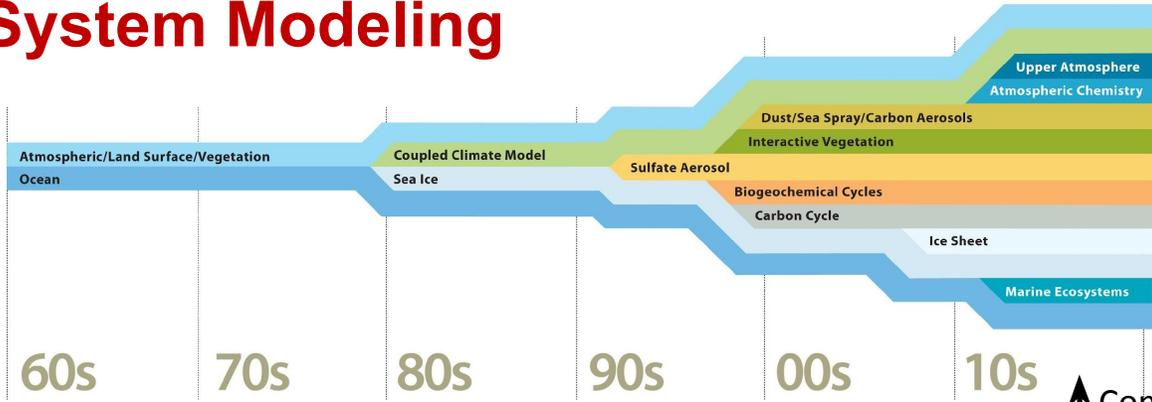

Containerized (cloud) configurations are also available.

Tuesday  
Simple Models  
Lecture

# **CESM supports a range of climate science goals through a single model code base**

- All component models can be active.
- All component models can be replaced with “data models”:
  - Allowing, for example, ocean-only, ocean – sea-ice coupled, land-only, atmosphere-only configurations.
- Many idealized model options exist: single column atmosphere model (SCAM); dry dynamical core; dry dynamical core with idealized moisture; gray radiation aquaplanet; radiative convective equilibrium world; full physics aquaplanet; slab ocean; etc.
- Numerous choices are available within components regarding their parameterizations.
- Increasing number of supported component sets and configurations are provided.

# Growth of Climate / Earth System Modeling

# More information Friday

- Getting involved in the CESM community
- Updates and highlights of CESM2 Capabilities
- Community Experiments
- Towards CESM3

Dr. Gokhan Danabasoglu  
CESM Chief Scientist

Thank You!
